Examiner's Statement of Reasons for Allowance

1. Claims 1-4 are allowed because the prior art of records fail to teach or suggest a method of detecting flatness of a band running along a longitudinal direction comprising the steps of measuring the load applied to the flatness measuring roll in several detection zones, forcibly cooling the flatness measuring roll, determining parameters responsible for cooling efficiency, wherein after heating the flatness measuring roll while passing through the angular contact sector of the flatness measuring roll by contact with the band, the external face of the flatness measuring roll is returned to a preset equilibrium temperature, in combination with the remaining limitations of claims 1-4.

2. Claims 5-15 are allowed because the prior art of records fail to teach or suggest a device which detects flatness of a band running along a longitudinal running direction and is subject to a tensile load, the flatness detection device comprising a flatness measuring roll, the flatness measuring roll includes a cylindrical external face, a plurality of detection zones distributed along a length of the flatness measuring roll, load measuring means, cooling means forcibly cooling the external face, adjusting means for adjusting cooling conditions wherein the external face of the flatness measuring roll is maintained at a pre set temperature, in combination with the remaining limitations of claims 5-15.
